FMS White Men

12

All ages, HIV negative and positive individuals

Name of Intervention	CDC AIDS Community Demonstration Projects or Real AIDS Prevention Project (RAPP) CDC Compendium pgs 2, 13
Risk Behavior(s)	Unprotected sex
Influencing Factor(s) or FIBs	All Subpopulations: Communication and negotiation skills Additional FIBs for African-Americans: Self-efficacy Hispanics: Cultural norms Whites: Cultural norms
Intended Immediate Outcomes	Increase condom use with main and non-main partners Improve communication and negotiation skills Improve self-efficacy Improve self perception of risk
Type	Community Level Intervention
Setting	Street settings, public sex environments, community agencies, organizations, businesses, residential complexes and other community venues
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention has been proven to be effective with all populations, including men who have sex with women, and targets the risk factor of unprotected sex. The factors influencing behaviors listed above are addressed in this intervention. The East Texas CPG suggests incorporating other factors influencing behavior for these populations, to include shame and guilt, substance use, knowledge of STDs, and self-esteem, into the role model stories, as well as having peer volunteers discuss these other factors with clients encountered during intervention activities. 14fmsm1

12

All ages, HIV negative and positive individuals

Name of Intervention	The Effects of HIV/AIDS Intervention Groups for High-risk Women in Urban Clinics CDC Compendium p.12
Risk Behavior(s)	Unprotected sex Multiple partners
Influencing Factor(s) or FIBs	All Subpopulations: Communication and negotiation skills, skills, misconceptions Additional FIBs for African-Americans: Self-efficacy Hispanics: Social norms
Intended Immediate Outcomes	Improve communication and negotiation skills Increase condom use Reduce the number of partners Improve self-efficacy
Type	Group Level Intervention
Setting	Inner-city Health Clinic Adaptable to other group settings
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention focuses on the major factors influencing behaviors found in the needs assessment conducted by the East Texas CPG—communication and negotiation skills, skills and misconceptions. Skills building is a critical component of the intervention, including exercises for behavioral skills as well as condom practice. The intervention resulted in increased condom use and significantly fewer instances of unprotected sex. This intervention gives providers a proven choice for setting other than an STD clinic. 14fmsm2

FMS White Men

12

All ages, HIV negative and positive individuals

Name of Intervention	Video Opportunities for Innovative Condom Education and Safer Sex (Voices/Voces) CDC Compendium p.14
Risk Behavior(s)	Sex without Condoms STDs
Influencing Factor(s) or FIBs	All Subpopulations: Communication and negotiation skills, access Additional FIBs for African-Americans: Self-efficacy Hispanics: Cultural norms Whites: Cultural norms
Intended Immediate Outcomes	Improve communication and negotiation skills Increase condom use skills and condom use Increase condom knowledge Improve self-efficacy Increase access
Type	Group Level Intervention
Setting	STD Clinics Adaptable to other settings
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention focuses on the major factors influencing behaviors found in the needs assessment conducted by the East Texas CPG—communication and negotiation skills and access. Men who participated in this intervention had a significantly lower rate of STDs. Videos provided culturally sensitive messages on risk, condom use and strategies for condom use. Interactive discussions with participants reinforced the videos' messages and enabled participants to address problems encountered with condom use. 14fmsm3

FMS White Men

12

All ages, HIV negative and positive individuals

Name of Intervention	Reducing Post-Release Risk among Male Prison Inmates Fact Sheets p. 82
Risk Behavior(s)	Unprotected sex Substance Use
Influencing Factor(s) or FIBs	All Subpopulations: Access
Intended Immediate Outcomes	<ul style="list-style-type: none"> • Increase awareness of personal risk relating to sexual and drug use risk behaviors • Offer a post-release risk-reduction plan • Refer individuals for community services such as HIV/STD testing, substance treatment, etc.
Type	Individual Level Intervention
Setting	State prison Setting may be adapted to any correctional facility
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	Matches the risk behaviors and factors influencing behaviors in these subpopulations. This intervention ensures that inmates know where to access services on release and receive basic information on HIV risks through unsafe sexual and drug use behavior, with possibility of referral to a more intensive group level or individual intervention. 14fms4

12

All ages, HIV negative and positive individuals

Name of Intervention	STD and HIV Risk in Heterosexual Adults Attending a Public STD Clinic: Evaluation of a Randomized Controlled Behavioral Risk Reduction Intervention Trial Fact Sheets p.23
Risk Behavior(s)	Unprotected sex Multiple partners
Influencing Factor(s) or FIBs	All Subpopulations: Communication and negotiation skills, relationship development Additional FIBs for African-Americans: Self-efficacy Hispanics and Whites: Cultural norms
Intended Immediate Outcomes	Decrease STDs Increase knowledge about prevention of HIV/STDs Improve decision-making skills Improve communication and negotiation skills Improve self perception of risk Improve self-efficacy
Type	Individual Level Intervention
Setting	STD Clinic in urban area May be adapted to other appropriate settings
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention addresses the major factors influencing behaviors found through the needs assessment in East Texas-communication and negotiation skills, and relationship development. The intervention resulted in increased condom use and decreased number of sexual partners. The intervention includes skills building, and referrals as needed. 14fmsm5

12

All ages, HIV negative and positive individuals

Name of Intervention	AIDS Education for Drug Abusers: Evaluation of Short-term Effectiveness: Enhanced Education Intervention CDC Compendium p. 6
Risk Behavior(s)	Unprotected sex Multiple partners Substance use
Influencing Factor(s) or FIBs	All Subpopulations: Skills Additional FIBs for African-Americans: Self-efficacy
Intended Immediate Outcomes	<ul style="list-style-type: none"> • Improve participants' self-efficacy regarding ability to initiate and maintain sexual harm-reduction practices • Increase condom use and safer sex practices • Decrease the harm of substance use on sexual risk behaviors • Improve self perception of risk
Type	Group Level Intervention
Setting	Inpatient drug detoxification and rehabilitation center; adaptable to correctional facilities, particularly those with substance abuse units
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	<p>This group level intervention was studied on and proven to be effective with drug users and targets drug- and sex-related behaviors. The factors influencing behaviors for the subpopulations are all addressed in this intervention. The Enhanced Educational Intervention provides skills building components needed by these subpopulations, including condom use exercises, role-playing and tension-release exercises.</p> <p style="text-align: right;">14fmsm6</p>

12

Name of Intervention	Group Counseling at STD Clinics to Promote use of Condoms CDC Compendium p. 8
Risk Behavior(s)	STDs including multiple visits for STDs during the past year Unprotected sex
Influencing Factor(s) or FIBs	All Subpopulations: Negotiation skills
Intended Immediate Outcomes	Increase condom use Improve negotiation skills Promote safer sex
Type	Group Level Intervention
Setting	Waiting room of STD clinic
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention is delivered in a single session to men of unknown sexual orientation waiting for an STD appointment and uses a video, group discussion and role-plays. The intervention targets the negotiation skills, a major factor influencing behavior identified in the needs assessment for these subpopulations and addresses the risk factor of repeated STDs within these subpopulations. The East Texas CPG views this intervention as an opportunity for educators in STD clinics to have an impact on clients when the outcome of unprotected sex is real and an immediate concern to clients. 14fmsm7

HMAZ 14: North Pine Woods

Tab 7 – Intervention Selection Form

Subpopulation: FMS African-American Men

Ranking: 5

FMS Hispanic Men

11

FMS White Men

12

All ages, HIV negative and positive individuals

Name of Intervention	Project Light Fact Sheets p. 43
Risk Behavior(s)	Unprotected sex STDs and multiple STDS during the last year
Influencing Factor(s) or FIBs	All Subpopulations: Communication and negotiation skills Additional FIBS for African-Americans: Self-efficacy
Intended Immediate Outcomes	Improve communication and negotiation skills Decrease number of STDs Increase condom use Improve self perception of risk Improve self-efficacy
Type	Group Level Intervention
Setting	STD Clinic Adaptable to health service organizations and other group settings
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention addresses the major factors influencing behaviors found by the needs assessment for these subpopulations--communication and negotiation skills, and additionally for African-Americans--self-efficacy. It resulted in significantly fewer instances of unprotected sex, increased condom use and more consistent condom use, and fewer diagnosed STDs at follow-up. The intervention provides opportunities to practice relevant condom use and negotiation skills. 14fsmm8

ALL HMAZs and the LMAZ

Tab 7 – Intervention Selection Form

Subpopulation: All **high priority** subpopulations, consistent with CDC Guidance, September 1997

Rankings: Same as the corresponding group in the selected HMAZ/LMAZ

Name of Intervention	Prevention Case Management (PCM)
Risk Behavior(s)	Multiple high risk behaviors consistent with HIV Prevention Case Management Guidance, September 1997 by the CDC Substance use Sex without condoms Multiple partners
Influencing Factor(s) or FIBs	Perceived susceptibility Fatalism Self Efficacy Peer Pressure Cultural group norms
Intended Immediate Outcomes	Increase condom use Decrease number of partners Increase Self Esteem Referral for new HIV positives into Early Intervention Programs Referral of HIV positives into more intensive Intervention Programs that address the Factors Influencing the Risky Behavior.
Type	Individual Level Intervention
Setting	Community based organization, STD clinics, other locations
Currently provided?	No
Rationale for selecting intervention:	This intervention should target only high-risk individuals, whether HIV -positive or HIV -negative, with multiple, complex problems and risk-reduction needs. This intensive, client-centered prevention activity has the fundamental goal of promoting the adoption and maintenance of HIV risk-reduction behaviors. It is suitable for individuals seeking stability and regularity in their lives and/or individuals who are reaching an action step in dealing with health concerns. PCM should include 1) client recruitment and engagement, 2) screening and assessment of HIV and STD risks and medical and psychosocial service needs, 3) development of a client-centered prevention plan, 4) multiple session HIV risk-reduction counseling, 5) active coordination of services with follow-up, 6) monitoring and reassessment of client's needs, risks, and progress, and 7) discharge from PCM services upon attainment and maintenance of risk-reduction goals.

pcm

ALL HMAZs and the LMAZ

Tab 7 – Intervention Selection Form

Subpopulation: All BDTPS; all subpopulations; all races, ethnicities and ages
 Rankings: Same as the corresponding group in the selected HMAZ/LMAZ

Name of Intervention	Prevention Counseling/Partner Elicitation
Risk Behavior(s)	Substance use Sex without condoms Multiple partners
Influencing Factor(s) or FIBs	Perceived susceptibility Environmental facilitators (access to condoms and testing) Knowledge of STDs Group or Cultural Norms
Intended Immediate Outcomes	Increase proportion of HIV -infected persons who know their status Increase condom use Improve communication and negotiation skills Improve self perception of risk Provide access to condoms and testing Improve knowledge of STDs Reduce Number of sex partners
Type	Individual Level Intervention
Setting	Community based organization, STD clinics, other community-based locations
Currently provided?	Yes
Rationale for selecting intervention:	<p>Counseling, testing, referral and partner services have been recommended as an effective intervention for all populations in Texas. In the Centers for Disease Control and Prevention's HIV Prevention Strategic Plan Through 2005, Goal 2 is to increase the proportion of HIV-infected people in the U.S. who know they are infected through voluntary counseling and testing. The CDC's objectives to meeting this goal support the inclusion of this intervention for all populations. These objectives include: improving access to voluntary, client-centered counseling and testing in high seroprevalance populations and increasing the number of providers who provide voluntary, client-centered counseling and testing. The core elements of this intervention include risk assessment, risk reduction plan, and the option to test for HIV either anonymously or confidentially.</p> <p>The Texas CPGs recommend the following strategies to promote PCPE: 1) Fact Sheet p. 31. Culturally Tailored HIV/AIDS Risk-Reduction Messages Targeted to African-American Urban Women. This 20-minute video increased the likelihood that women would view HIV as a personal risk, to request condoms, to talk with friends about AIDS, and to get tested for</p>

	<p>HIV.</p> <ol style="list-style-type: none">2) Fact Sheet p. 34Context Framing to Enhance HIV Antibody Testing Messages Targeted to African-American Women. This 25-minute video emphasizes the personal losses from not testing. Women were more likely to get tested and to talk to partners about testing after this video.3) Single session HIV/AIDS informational education: basic informational sessions discussing risks, correct condom and bleach kit use, referrals and the like enhance participants willingness to test either during or after the session.4) Bar outreach: sustained, consistent presence in a bar type setting enhances testing. The specific outreach that is known to work consisted of weekly presence in the bar, with an informational table, with staff present and interacting with bar managers, performers and patrons for 2-4 hours at a time. Testing was conducted at the bar or referral made to a community-based organization. Staff gained the trust of all through their sustained efforts. <p style="text-align: right;">pcpe</p>

Tab 7 – Intervention Selection Form

Subpopulation: HIV positive individuals
All races, ethnicities, ages

Ranking: HIGH

Name of Intervention	Effectiveness of an Intervention to Reduce HIV Transmission Risks in HIV-Positive People <div style="text-align: right;">Appendix</div>
Risk Behavior(s)	Unprotected sex
Influencing Factor(s) or FIBs	
Intended Immediate Outcomes	Increase condom use Improve communication and negotiation skills Improve coping skills Improve decision-making skills
Type	Group Level Intervention
Setting	Community based organization
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention is the sole group level intervention the East Texas CPG selected for HIV positive individuals of all ages. Although the CPG does not know the factors influencing behaviors for positive individuals, the CPG notes that the FIBs this intervention addresses--communication and negotiation skills, self-efficacy--were FIBs in nearly every subpopulation in every MAZ, across races, ethnicities and ages; thus they would most likely be FIBs for HIV positives individuals in their respective subpopulations as well. This intervention provides opportunities to practice these skills as well. <div style="text-align: right;">Positiv1</div>

ALL HMAZs and LMAZ

Tab 7 – Intervention Selection Form

Subpopulation: HIV positive individuals
All races, ethnicities, YOUTH

Ranking: HIGH

Name of Intervention	Stay Healthy, Act Safe: Efficacy of a Preventive Intervention for Youths Living with HIV Fact Sheets p. 57
Risk Behavior(s)	Unprotected sex Multiple partners Substance use
Influencing Factor(s) or FIBs	All BDTPs: Communication and negotiation skills Additional FIBS for MMS: Self-efficacy IDU Female: Self-efficacy IDU Male: Self-efficacy
Intended Immediate Outcomes	Improve communication and negotiation skills Improve coping skills Improve decision-making skills Reduce the harm of substance use on risky behaviors Increase self-efficacy skills
Type	Group Level Intervention
Setting	Adolescent clinical care sites
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention significantly reduced the HIV transmission behaviors of HIV positive youth. The intervention uses the major factors influencing youth behavior found by the East Texas CPG Needs Assessment—communication and negotiation skills and self-efficacy. Interventions targeted specifically for HIV positive youth are needed to address not only the greater needs of positive individuals, but also the special needs of HIV positive youth. This intervention addresses both of these. Positiv2

Subpopulation: Youth, all races/ethnicities Ranking: Same as corresponding BDTP in the HMAZ/LMAZ

Name of Intervention	Be Proud! Be Responsible! Reductions in HIV Risk-associated Sexual Behaviors among Black Male Adolescents: Effects of an AIDS Prevention Intervention CDC Compendium p.20
Risk Behavior(s)	Unprotected sex Multiple partners Substance Use
Influencing Factor(s) or FIBs	Self-efficacy Communication and negotiation skills Skills Knowledge (safe sex, basic HIV, STD information, where to test)
Intended Immediate Outcomes	Increase condom use Reduce number of partners Increase correct condom use Improve communication and negotiation skills
Type	Group Level Intervention
Setting	On school property after hours; adaptable to settings other than on school property
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention has been proven to increase condom use and reduce the number of sex partners, which are major risk behaviors for youth. The intervention addresses the major factors influencing behaviors found in the East Texas CPG Needs Assessment—communication and negotiation skills, self-efficacy and skills--through role-play, practicing correct condom use and information about risks associated with injection drug use and specific sexual activities. The intervention is done with a peer group, thus creating a peer environment and reinforcing healthy social and group norms. The East Texas CPG found this 5-hour, one session intervention to be very do-able, while still being proven effective. Youth1

Name of Intervention	BART (Becoming A Responsible Teen. Cognitive-Behavioral Intervention to Reduce African-American Adolescents' Risk for HIV Infection. CDC Compendium p.25
Risk Behavior(s)	Unprotected sex
Influencing Factor(s) or FIBs	Self-efficacy Communication and negotiation skills Skills Knowledge (safe sex, basic HIV, STD information, where to test)
Intended Immediate Outcomes	Increase condom use Improve communication and negotiation skills
Type	Group Level Intervention
Setting	A public health clinic serving low-income families
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention has been proven to increase condom use and lower the frequency of unprotected sex, which are major risk behaviors for youth in all BDTPs. The intervention also significantly delayed the onset of sexual activity for abstinent youth. The intervention addresses the major factors influencing youth behaviors found in the East Texas CPG Needs Assessment—communication and negotiation skills, self-efficacy and skills. Youth2

Ranking: Same as corresponding
BDTP in the HMAZ/LMAZ

Name of Intervention	Focus on Kids. A Randomized, Controlled Effectiveness Trial of an AIDS Prevention Program for LowIncome African-American Youths CDC Compendium p.24
Risk Behavior(s)	Unprotected sex
Influencing Factor(s) or FIBs	Self-efficacy Communication and negotiation skills Skills Knowledge (safe sex, basic HIV, STD information, where to test) Access (to condoms, referrals, testing)
Intended Immediate Outcomes	Increase condom use Improve communication and negotiation skills
Type	Group Level Intervention
Setting	Recreation centers associated with public housing developments; rural campsite setting
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention has been proven to significantly increase condom use, a major risk behavior for youth in all BDTPs. The intervention addresses the major factors influencing youth behaviors found in the East Texas CPG Needs Assessment—communication and negotiation skills, self-efficacy, skills, knowledge and access. The East Texas CPG felt this intervention is important as it builds on already established friendship groups, thus reinforcing healthy behavior in the youths' social network. Youth3

ALL HMAZs and the LMAZ

Name of Intervention	ARREST: AIDS Risk Reduction Education and Skills Training Program Fact Sheets p.52
Risk Behavior(s)	Unprotected sex Substance use
Influencing Factor(s) or FIBs	Self-efficacy Communication and negotiation skills Perceived susceptibility
Intended Immediate Outcomes	Increase correct condom use Improve communication and negotiation skills and assertiveness Increase perception of risk Change attitudes
Type	Group Level Intervention
Setting	Community based agencies
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	This intervention has resulted in a significant change in AIDS attitudes and increases in risk reduction skills and perceived risk for youth. The intervention addresses the major factors influencing youth behaviors found in the East Texas CPG Needs Assessment—communication and negotiation skills, self-efficacy, and perceived susceptibility. The East Texas CPG noted the importance of the skills building exercises for decision-making communication, refusal and assertiveness skills, included in this intervention and the fact that the intervention addresses drug use behaviors. Youth 4

ALL HMAZs and the LMAZ

Tab 7 – Intervention Selection Form

Subpopulation: Youth, all races/ethnicities
HIV negative and positive

Ranking: Same as corresponding
BDTP in the HMAZ/LMAZ

Name of Intervention	Comparison of Education versus Behavioral Skills Training Interventions in Lowering Sexual HIV -Risk Behavior of Substance-Dependent Adolescents <div style="text-align: right;">Fact Sheets p.64</div>
Risk Behavior(s)	Unprotected sex Multiple partners Substance use STDs Sex trade (HIV positive youth) Partner at risk (HIV positive youth)
Influencing Factor(s) or FIBs	Self-efficacy Perceived susceptibility Additional FIB for IDU females: Interpersonal dynamics
Intended Immediate Outcomes	Increase correct condom use Improve communication and negotiation skills and assertiveness Increase perception of risk Change attitudes
Type	Group Level Intervention
Setting	Substance Abuse Clinic (residential)
Is this intervention currently being provided in your planning area?	No
Rationale for Selecting this Intervention:	To target substance-dependent youth. Substance use is a major risk factor for acquiring and transmitting HIV among youth and this intervention is specific for those youth in a setting where multiple sessions can be accomplished. The intervention also addresses major factors influencing youth behaviors found in the East Texas CPG Needs Assessment—self-efficacy, and perceived susceptibility and for IDU females, interpersonal dynamics. This intervention resulted in decreases in sexual risk activities such as exchanging sex for money or drugs, casual sex and sex with high-risk partners; addressing these activities is particularly important for HIV positive youth. <div style="text-align: right;">Youth 5</div>
